PROFESSIONAL SUMMARY

Computer Science & Engineering graduate and Fullstack Web Development intern with proven experience building responsive, production-ready web applications using React, JavaScript, Node.js, HTML, and CSS. Built BuildMart — a live, deployed full-stack multi-seller e-commerce platform with JWT auth, role-based access control, Cloudinary image hosting, and a seller dashboard. Completed a Deloitte Data Analytics Job Simulation via Forage. Comfortable integrating REST APIs, working in Git-based workflows, and translating Figma designs into polished UIs. Seeking a Frontend or Fullstack Developer role where I can deliver real business impact.

PROJECTS

BuildMart — Multi-Seller E-Commerce Platform • React • Node.js • Express • MongoDB • Tailwind CSS • JWT

2025 – 2026

- Built a production-grade full-stack e-commerce marketplace with Buyer, Seller, and Admin roles, each with dedicated dashboards.
- Implemented JWT-based authentication, bcrypt password hashing, role-based access control (RBAC), and secure protected routes.
- Features include product management with Cloudinary image hosting, shopping cart, order tracking (Pending → Delivered), individual item cancellation, and a 30-day returns system with seller approval workflow.
- Seller dashboard with real-time analytics, bulk order status updates, filtering, and search. Admin panel for user/seller approval and platform moderation.
- Tech stack: React 18 + Vite (frontend), Node.js + Express (backend), MongoDB + Mongoose, Tailwind CSS, Lucide React, Axios. [Live Demo ↗](#) | [View Repo ↗](#)

Weather Application • JavaScript • HTML • CSS • OpenWeatherMap API

2025

- Built a fully responsive weather app fetching real-time city data via OpenWeatherMap API with dynamic UI updates.
- Implemented error handling for invalid inputs, a clean card-based layout, and mobile-first CSS.
- Deployed on Vercel — demonstrates live API integration and production deployment skills. [View Repo ↗](#)

Brain Stroke Detection System · Python · CNN · TensorFlow · OpenCV	2025
▸ Built an ML pipeline to detect and classify brain strokes from MRI scans using CNN-based feature extraction. ▸ Applied image preprocessing (normalization, augmentation) to improve classification accuracy. ▸ Documented methodology for academic submission. Live Demo ↗ View Repo ↗
